DETAILED ACTION

Allowable Subject Matter

1. Claims 1-6, 8, 9, 12, 13, and 15-23 are allowed.
2. The following is an examiner's statement of reasons for allowance: Please see the Applicant's Arguments/Remarks Made in an Amendment filed 4/5/11, the noted allowable matter in the previous office action filed 10/5/10, and below.

Claim 1 recites A portable multi-voltage solar cell charger comprising: at least one solar cell plate holding a plurality of solar cells which are molded and arranged in at least one of series or parallel; a film formed on the solar cell plate, the film having a reformed surface to reduce reflection of sunlight; a power control part supplying a load side with power generated from the solar cells after automatically perceiving a voltage required from the load side; and a case holding the solar cell plate and the power control part, the case combining at least one portable electronic device with a charging device, wherein the power control part comprises a step-up switching regulator, a step-down switching regulator, and a control circuit, and wherein the control circuit comprises: an A/D converter perceiving a voltage required from the load side and converting the perceived voltage into a digital value; a microprocessor determining the voltage required from the load side using the digital value; a D/A converter converting the voltage determined from the microprocessor into an analog value, a comparator comparing the analog value from the D/A converter with an output from the solar cell plate; and an AND gate integrating a signal from the comparator and a signal from a pulse generator and adjusting the output from the solar cell plate.

Claim 12 recites A portable multi-voltage solar cell charger comprising: at least one solar cell plate holding a plurality of solar cells which are molded and arranged in at least one of series or parallel; a film formed on the solar cell plate, the film having a reformed surface to reduce reflection of sunlight; a power control part supplying a load side with power generated from the solar cells after automatically perceiving a voltage required from the load side; a case holding the solar cell plate and the power control part, the case combining at least one portable electronic device with a charging device; and two copper plates formed at an interval of 90° on the inside of the case which is in contact with the gutter member so that polarities are changed by rotating the gutter member with an angle of wherein the case comprises a gutter member on which a wire connected to a output terminal of the power control part is wound and stored, wherein the gutter member comprises a disc and is formed so as to be replaced.

Claim 23 recites a method of charging an electronic device using a portable solar cell charger, comprising: perceiving a voltage required from a load side on a microprocessor by converting the voltage using an A/D converter; converting the perceived voltage into a corresponding voltage using a D/A converter and comparing the converted voltage with a voltage from a solar cell plate using a comparator; integrating a signal from the comparator and a signal from a pulse generator using an AND gate and adjusting the voltage from the solar cell plate based on the integrated signal; and supplying a voltage from the solar cell plate into the load side according to the adjusted voltage.

The prior art of record does not disclose the above limitations, nor would it be obvious to modify the art in such a manner.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
